No resolved problems to display.

Hospital Course: Gary Williams is a 37 y.o. male who presented to the ER with psychosis. His UDS is positive for amphetamines and opiates. he was medically stabilized and transferred to IMH, Spencer for further treatment. Gary Williams was admitted under suicide precautions and transitioned to close observation for self harm as he began to progress in treatment. A review of his outpatient medications was done and he was started on Clonidine 0.1 mg po BID for anxiety/concentration. He reports the wellbutrin was not helping him.

Gary Williams was able to attend group therapy, milieu therapy, recreational therapy and reported significant benefit from them. At the end of her hospital stay, Gary Williams was no longer suicidal, had no homicidal thoughts, had no evidence of psychosis and was deemed to have
